NATURAL GAS IS RESHAPING THE FUEL MARKET

Oil is not getting cheaper; natural gas is.

The solid facts are:

- There is more gas available every year than the previous,
- Natural gas is everywhere, a natural gas OPEC-like cartel is unlikely
- Shale gas is showing up in fields close to consumption points in the US, Europe, South America, and China,
- New technologies are making natural gas extraction commercially viable at NYMEX prices
- The price of natural gas is detached from the price of oil
- The price of natural gas is detached from the price of oil
- Producing LNG is cheaper today than it was 20 years ago
- Commercial shipping is possible in ranges from 240,000 m^3, or as little as 1,000 m^3
- There are onshore and offshore storage and regas solutions for mini-midi and large users

MAKE THE QUESTION:

WHY NOT NATURAL GAS?

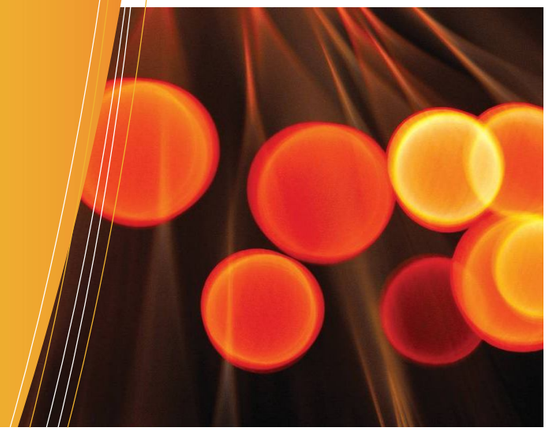
SOLUTIONS FOR:

- LNG DISTRIBUTION
- LNG STORAGE & VAPORIZATION
- GAS PIPELINES
- GAS DETECTION
- FIRE DETECTION & CONTROL
- MID & HIGH-SPEED GENERATOR ENGINES CONVERSION TO BI-FUEL (DIESEL/GAS)
- CO-GENERATION OF ELECTRICITY, HEAT, STEAM AND A/C
- GAS POWER PLANTS
- HEAVY VEHICLES NATURAL GAS



Technology at work for you

CONNECTING YOUR BUSINESS TO THE GAS & ENERGY TECHNOLOGY YOU NEED

We bring solutions to the energy business.

The “Virtual Pipeline” makes LNG available to stranded customers, be it a factory or an entire country.

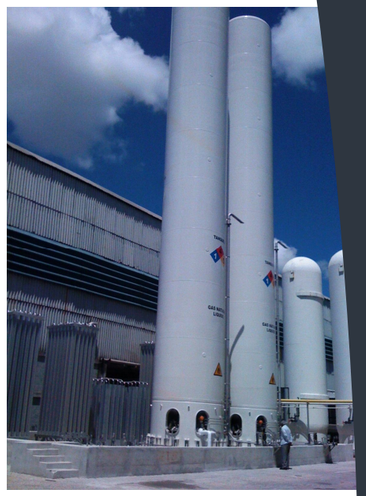
If there is a nearby LNG terminal, we can design and build for you a system to transport and use the LNG at your utility, industry or domestic use.

If there is no LNG terminal we can do the pre-FEED for you and find the suitable partners for the construction and supply.

We offer a complete range of services. Our staff can study, design and construct your LNG terminal, the gas pipeline and the boiler or furnace conversion to burn natural gas.

We can supply, install and commission new and used gas-fired generator sets and convert existing ones to bi-fuel.

For your safety we design, supply and offer gas and fire detection, fire suppression and monitoring equipment



flexible energy solutions for your business needs

COGENERATION IS KING

Using LNG you have a liquid stored at -162 °C that you will bring to near-ambient temperature. All that energy can be harness to produce cool air, chilled water for your industrial or office applications.

Your genset, boiler or furnace produces heat that we know how to use to increase productivity. As steam, hot water or air conditioned, we have the solution.

We can turn that dissipated energy into money in your bank.

TRAINING, KNOW-HOW & 24/7 SERVICE

We do not finish our projects until we train your personnel in the proper operation and maintenance of the solution we sell.

We know how critical are the solutions we provide for your operations and the deep impact they have on your bottom-line. You can expect from us 24/7 availability. The continuity of your business is our commitment

ON THE ROAD; CLEAN-FUEL APPLICATIONS.

LCNG IS THE BUZZWORD

Everywhere in the world natural gas vehicles is what the transportation industry is looking at.

We have unique designs to supply LNG or Liquid-to-Compress Natural Gas (LCNG) .

Our fuelling stations design relies on the forefront technology combined with the most competitive suppliers.

Our off-the-grid fuelling stations are pre-package designs that optimize space.

We can get you to dispense LNG or CNG to your fleet very fast

OUR LCNG FUELLING STATIONS…

- Easy to supply
- Small footprint
- Very low energy use
- Safe
- Fast installation
- Low investment
- Low operations cost

CUSTOM SOLUTIONS

Not two projects are the same

Our team is experience in electric generation, industrial boilers and furnaces, heavy vehicles applications and a variety of utility and industrial settings.

The most efficient solution is our goal and we will make sure that all option are covered

WE BUILD STUFF

We are people building stuff. We do not want to give you a speech about the sophistication of cryogenic technology.

We understand your problem and will look for a solution for it:

- Economically sound
- Fast
- Safe
- Reliable

LNG TRANSPORT

The most efficient way to make LNG travel short distances.

Proven in the heat of the Caribbean, our trailers losses due to boil-off is zero in distances up to 1,000 km and 1,000 hours.

Fitted with pumps, meters and printers, our trailers are ready for drop delivery or full loads
